

Infrared sensors for precise temperature measurement

⚙️ Description:

OS137 using non-contact temperature measurement device. Provide 4-20mA current output it can be easily installed in a variety of applications, especially suitable for long distances, install more noise industrial environments. The probe uses a stainless steel shell, in the industrial

⚙️ Performance :

Spectral Range	:	1.6um/1um
Accuracy @ 25°C	:	±0.5% or 1°C
Repeatability @ 25°C	:	±0.5% or 5°C
Response Time	:	10ms(95%)
Emissivity	:	0.10-1.00
Analog Output	:	4-20mA with 750 ohm Max. load
Power	:	24 VDC -5%
Sight	:	Laser Sighting(Level 2 laser, the maximum output power 1mW, 650nm)
Operating Ambient Temperature:		10 to 60°C (Without Cooling)
Storage Temperature	:	20 to 70°C
Protection class	:	IP65
Weight (sensor only)	:	0.9kg

⚙️ Dimensions :

Factory-Installed Sensor Options

- Mounting Adapters
RAM (Right Angle Mount)

MFL (Mounting Flange-Large)

- Digital Panel Meter
RAM (Right Angle Mount)

Light circuit diagram(Optical properties and lens)

Reference dimensions (mm)

Standard lenses SF: Measure distance > 480mm, (24mm @ 1200)
 Resolution: Near focal lens CF1: 1.8mm, CF2: 0.9mm
 Near focal lens CF1: 200-520mm
 Near focal lens CF2: 120-320mm
 Diameter measurement points depends on the target and the distance between probes,
 Measuring point size reference 90% of the radiation energy

Infrared sensors for precise temperature measurement

HOW TO ORDER

⚙️ **Basic Model :** OS137

⚙️ **Output :** V

- V 0-5VDC
- I 4-20mA

⚙️ **Temperature Range :** 2

- 1 0 to 50°C
- 2 0 to 100°C
- 3 0 to 500°C
- 4 0 to 1000°C

Ordering Example:
OS137 - V - 2
